

JAVA OOP – Lab 5

1. Implement the class Account described below:

2. In the driver, create an ArrayList of Accounts. Create a Menu for the user :
 - A. Create account
 - B. Remove account (from the ArrayList), given its ID.
 - C. credit money to an account given its ID
 - D. debit money from an account given its ID
 - E. Transfer money from an account to another.
 - F. Print the list of available accounts.

In case of B, C, D and E, the user should be prompted to enter the requested accounts' ID. In case of wrong ID a message should be displayed
